

∞ Learning activity hexagons

The learning activity hexagons are intended to simplify the multitude of possibilities in blended education design. By placing three considerations opposite one another, a hexagon is created. The hexagon helps to (re)design and visualise a learning journey, at lesson, course and curriculum level. The eight variations of the hexagon can also be used to analyse existing courses. The hexagons are 'value-free'. They invite you to have a meaningful conversation about (digital) didactics. For more explanation go to <https://distanceeducation.rotterdamuas.com>.
